

Declaration

on the conformity and

the safe use of the

Eberhard Faber Bodymarker and Tattoo Skinmarker

The above mentioned products fulfill the requirements of the European Regulation (EC) no 1223/2009 on cosmetic products. The notification on the database of cosmetic products (CPNP) has been done. Furthermore the Tattoo Skinmarker meet the criteria of the German Tattoo Regulation (Tätowiermittelverordnung) as well as the EU regulation 2020/2081 (REACH annex XVII) as regards substances in tattoo inks or permanent make-up.

The Bodymarkers are suitable for the temporary painting on the childrens' skin. The drawings can easily be removed by using water and soap. The pre-marking of professional tattoos with the Tattoo Skinmarker is possible without healthy risk on adults' skin. When penetrating the tattoo subsequently, the Skinmarker ink partially gets in contact with the lower skin layer. This was taken into account accordingly in the safety assessment on cosmetic products.
